PET18-5

Operation mechanism

It transmits ON/OFF signal with a magnetic coupling of coils.

The coil of transmission part and proximity sensor is coupled electronically, the induced current is generated at closed-loop of transmission part influenced by a magnetic field from proximity sensor coil when the switch of sensing part is ON.

Feature data

Please note the proximity sensor detects the surrounding cover of the sensing side of transmission coupler even the connection switch is OFF. (Sensing part) for part.

Connections

Proper usage

1. Please use the device within the rated temperature range and do not use outdoors.
2. Please use the code tensile strength within the rated range.
3. Please do not share the connection of proximity code and power line.
4. Please do not tighten the nut with excessive power and use a washer for assembling.
 - ①The allowable tightening strength at the front and latter part is 150kgf • cm.
 - ②The above allowable tightening strength is for using a washer.
5. Please shorten the wiring to avoid noise.
6. Please use the cable written on the specification of the product. If the other cable or a crooked cable is used, the waterproof cannot be maintained.
7. 0.3mm² or larger cable can be extended up to 5m.
8. When the transceiver is attached to the proximity sensor or close to the wires, it may cause a malfunction.
9. The contact switch in the sensing part should not have leakage current when it is OFF.
10. The contact resistance is under 300mΩ, open resistance is more than 10MΩ to satisfy the specification of contact switch. (Limit switch or micro switch)
11. The inductive proximity sensor used in output part may cause a malfunction, if metal particles attach to sensing area.
12. It is able to transmit signal through the plastic or mirror.
13. Please set sensing distance within part A of the below operation range for mounting at the rotator.
